

# AC DRIVES ACH550

## Basic Type Code Information

## Ordering Information

To order an ACH550 drive, select the appropriate type code shown in the selection guide for your input voltage. This type code represents the basic drive product. For the ACH550-UH wall-mounted units, this includes the drive and the US conduit box. For the ACH550-UH floor-mounted units, this includes the free-standing drive with top entry / top exit for motor and power cables and a common mode filter for drives larger than 200 HP. To add options to these products, simply add a + at the end of the type code followed by the catalog code shown for that option.

Example: ACH550-UH-046A-2 plus a UL Type 12 (NEMA 12) enclosure and LonWorks adapter. The type code that should be indicated on the order would be:

ACH550-UH-046A-2+B055+K452

NEMA 12      LonWorks Adapter
