

## iglidur® M250 – Thick and Robust

Excellent vibration dampening

Resistant to edge loading

High impact resistance

Thick walled according to DIN 1850

Dirt can become embedded for shaft protection

## iglidur® M250 | Thick and Robust

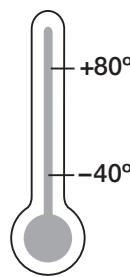

The self lubricating plain bearings made of iglidur® M250 are defined by their impact strength, vibration dampening, and wear resistant properties. They excel in applications in which vibration dampening is necessary, for example, in fitness and packaging machines.

### Thick and Robust

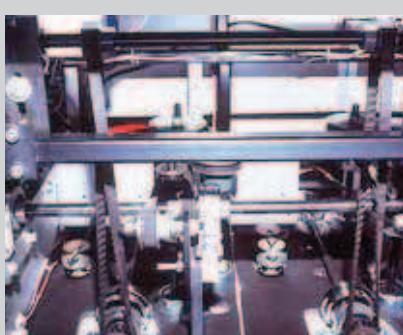

**When to use iglidur® M250 plain bearings:**

- When the bearings are exposed to high amounts of dirt
- When high vibration damping is necessary
- For low to average speeds
- When mechanical reaming of the wall surface is necessary
- Resistant to edge loads
- High impact resistance
- Thick-walled

**When not use iglidur® M250 plain bearings:**

- For applications in wet areas
  - iglidur® H (chapter 12),
- When very high precision is necessary
  - iglidur® P (chapter 17),
- For very smooth shafts
  - iglidur® J (chapter 3),
- when a cost-effective wear resistant bearing is desired
  - iglidur® R (chapter 19)

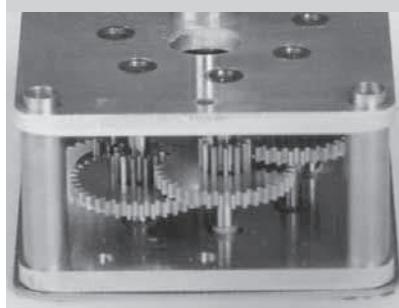

**Picture 4.1:** Paper dust in this mail sorting device always led to an early malfunction of the previous bearings used. Problem solved.

**Material Table**

General Properties	Unit	iglidur® M250	Testing Method
Density	g/cm3	1,14	
Colour		Charcoal	
Max. moisture absorption at 23°C / 50% r.F.	% weight	1,4	DIN 53495
Max. moisture absorption	% weight	7,6	
Coefficient of sliding friction, dynamic against steel	$\mu$	0,18 - 0,40	
p x v value, max. (dry)	MPa x m/s	0,12	
Mechanical Properties			
Modulus of elasticity	MPa	2.700	DIN 53457
Tensile strength at 20°C	MPa	112	DIN 53452
Compressive strength	MPa	52	
Max. recommended surface pressure (20°C)	MPa	20	
Shore D hardness		79	DIN 53505
Physical and Thermal Properties			
Max. long term application temperature	°C	80	
Max. application temperature, short term	°C	170	
Min. application temperature	°C	-40	
Thermal conductivity	W/m x K	0,24	ASTM C 177
Coefficient of thermal expansion	K <sup>-1</sup> x 10 <sup>-5</sup>	10	DIN 53752
Electrical Properties			
Specific volume resistance	$\Omega$ cm	> 10 <sup>13</sup>	DIN IEC 93
Surface resistance	$\Omega$	> 10 <sup>11</sup>	DIN 53482

Continuous	0,8	0,6	2,5
Short term	2	1,4	5

Table 4.2: Maximum surface speeds

iglidur® J	Application Temperature
Minimum	-40 °C
Max. long term	+80 °C
Max. short term	+170 °C

Table 4.3: Temperature limits for iglidur® M250

The self lubricating plain bearings made of iglidur® M250 are defined by their impact strength, vibration dampening, and wear resistant properties. They excel in applications in which vibration dampening is necessary, for example, in fitness and packaging machines. Since they are additionally able to absorb dirt, they are also suited for agricultural machines and garden appliances.

## Surface Pressure

iglidur® M250 bearings can withstand radial loads of a maximum 20 MPa. The material deformation is below 2% at room temperature. Compared with other iglidur® materials iglidur® M250 bearings are highly elastic. By this elasticity, they are able to yield very well, but retain their original shape again. A plastic deformation is minimal up to the permissible surface pressure.

Graph 4.2

► Surface Pressure, page 1.18

## Permissible Surface Speeds

As standard, iglidur® M250 is manufactured as a thick walled bearing. iglidur® M250 is best suited for low to medium surface speeds. The maximum permissible speed for dry running applications is 0.8 m/s (rotating) or 2 m/s (linear).

► Surface Speed, page 1.20

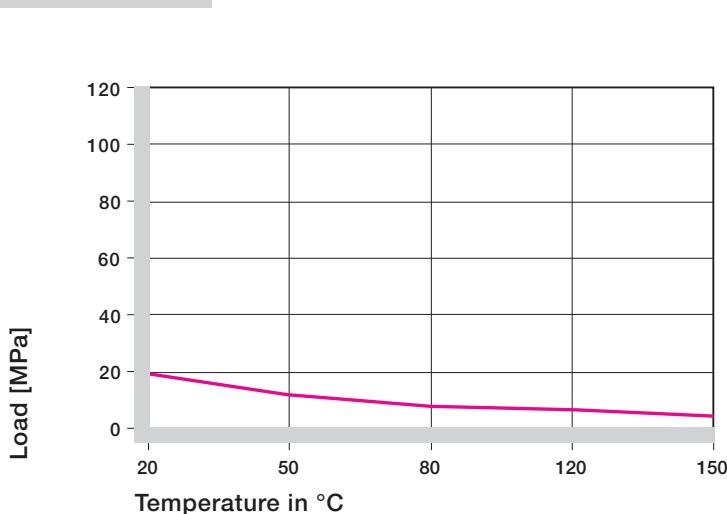

► p x v value, page 1.22

## Temperatures

The maximum permissible short term temperature is 170°C. However iglidur® M250 plain bearings may only be exposed to this temperature without any additional load. The long term permissible application temperature is 80°C. This is also the location of the wear limit, i.e. the temperature over which the wear increases exponentially.

Graph 4.3

► Applications Temperatures, page 1.23

Graph 4.3: Recommended maximum surface pressure of iglidur® M250 as a function of temperature

## Friction and Wear

The coefficient of friction  $\mu$  of a plain bearing among other things is influenced by the surface speed and the load. If the load stays constant, then the coefficient of friction increases with increasing speed (see Graph 4.4).

On the other hand, an increase in load at constant speed can result in a reduction in the coefficient of friction (see Graph 4.5).

Friction and wear are also greatly dependent on the surface of the shaft. If you observe the coefficient of friction, then the ideal shaft finish for iglidur® M250 bearings is  $R_a = 0.6 \text{ mm}$ .

- Graphs 4.4 to 4.6
- Coefficients of Friction and Surfaces, page 1.25
- Wear Resistance, page 1.26

## Shaft Materials

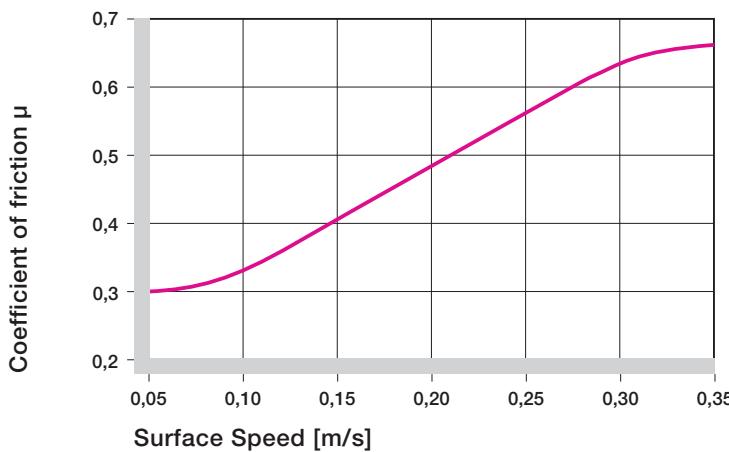

Graphs 4.7 to 4.9 show results of testing different shaft materials with plain bearings made of iglidur® M250.

Up to loads of 2 MPa the shaft material plays a relatively small role for rotational movements. Graph 4.7 best illustrates which shaft materials are best suited for smaller loads. If the load increases, the wear of a bearing clearly increases. Therefore, a suitable shaft material must be considered for higher loads. These are hardened shafts, such as cold-rolled steel or hard chromed shafts. Graph 4.9 makes it clear that iglidur® M250 is considerably better for rotational than for oscillating operation. However, it must be mentioned that in oscillating movements, often the vibrations acting on the bearing are especially high. Here, iglidur® M250 can utilise its special dampening properties. In our test, these vibrations are excluded so that the comparison between rotation and oscillating operation is captured first.

Graph 4.9: Wear for oscillating and rotating applications with different shaft materials at  $p = 2 \text{ MPa}$

## Installation Tolerances

iglidur® M250 plain bearings require a relatively large amount of clearance for optimal operation. This ensures that the bearing remains reliable during temperature change and water absorption.

This clearance, which would not be acceptable for a metallic plain bearing, allows the iglidur® M250 to exhibit its best qualities, such as wear resistance and maintenance-free operation. The disadvantages of the clearance are minimised by the vibration dampening properties.

The bearings are designed for pressfit into a housing machined to a H7 tolerance. After being assembled into a nominal size housing, the inner diameter adjusts to meet our specified tolerances. Please adhere to the catalogue specifications for housing bore and recommended shaft sizes. This will help to ensure optimal performance of iglidur® plain bearings.

► Testing Methods, page 1.35

## Chemical Resistance

iglidur® M250 plain bearings have a good resistance to chemicals. They are resistant to most lubricants. They are not affected by most weak organic and inorganic acids. The moisture absorption of iglidur® M250 plain bearings is approximately 1.4% in standard atmosphere. The saturation limit in water is 7.5%. This must be taken into account along with other applicable conditions.

☒ Graph 4.10

► Chemical Table, pages 70.1

## Radiation Resistance

Plain bearings made from iglidur® M250 can be used conditionally under radioactive radiation. They are resistant to radiation up to a radiation intensity of  $1 \times 10^4$  Gy.

## UV Resistance

iglidur® M250 plain bearings are permanently resistant to UV radiation.

Diameter d1 [mm]	Shaft h9 [mm]	iglidur® M250 D11 [mm]

Table 4.5: Essential tolerances for iglidur® M250 plain bearings after pressfit

## Vacuum

In a vacuum environment, the iglidur® M250 plain bearing releases moisture as vapour. The relatively high moisture absorption of the bearing allows only limited use in the vacuum.

## Electrical Properties

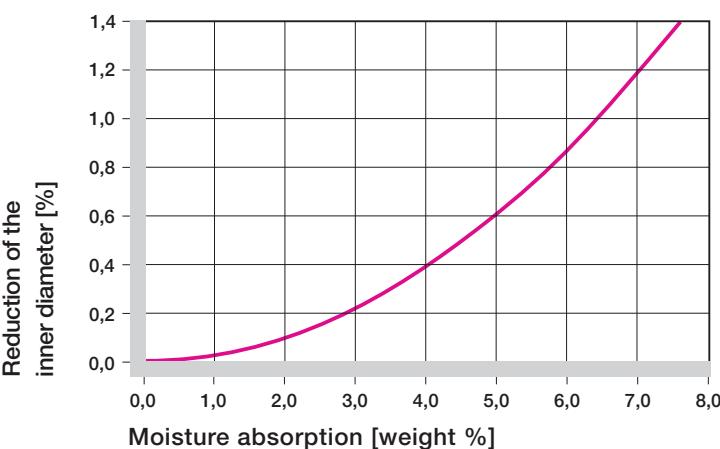

iglidur® M250 plain bearings are electrically insulating.

Medium	Resistance
Alcohol	+ to 0
Hydrocarbons	+
Greases, oils without additives	+
Fuels	+
Diluted acids	0 to –
Strong acids	–
Diluted alkalines	+
Strong alkalines	0
